Supply flexibility

Demand responds

# Flexibility Resources

Finding ramping capabilities

Flex4RES

Supply flexibility

Sector coupling/  
Electrification

Demand responds

# Sector coupling

## Electrification as source of flexibility

Flex4RES

Distribution of EU energy consumption  
(Source: EU Heating and Cooling strategy)

### From technical to realisable potentials

### Framework conditions

- Market design
- Direct regulation
- Fiscal policies
- Support schemes
- Grid regulation

Large flexibility potentials in electrification  
of the energy sectors

Hindered by regulatory barriers

Remove barriers

# District heating-electricity interface

Electrification as source of flexibility

Flex4RES

# Choice of heat supply - at different electricity prices

Flex4RES

Patchwork regulation between electricity and heat

- Taxes on electricity consumption
- Heat is taxed at the fuel input
- Biomass exempted for taxes

More heat only boilers.  
Decoupling of electricity and heat  
markets

## Unlocking a decarbonised, sustainable energy future

Make the sector coupling/electrification as flexible as possible

- Remove barriers
- Improve the business case for flexible power-to-heat/gas technologies
- Increase market integration and the value of VRE

Coherent changes in market designs, regulatory framework condition, and coupling of markets

Strong today - Stronger tomorrow

Current  
electricity system

The trichotomy  
of energy policy

Decarbonised  
energy systems

# Wind Power has consequences for the energy system!

Flex4RES

**Steeper residual load duration curve**

- Less base load hours
- Lower price levels

Market design:

**Capacity mechanism** or  
**Scarcity pricing**

# Wind share in Danish annual electricity consumption

Flex4RES

Sol- og vindenergiens andel i elsystemet er vokset år efter år. 2017 sætter ny rekord med en vind- og solandel på **45,8 procent**. Nedgangen i 2016 skyldes primært, at året var meget vindfattigt.
